README.md

Extended Word Count

Options

- w - counts the words
- W - gets word usage
- c - counts all chars (no whitespaces)
- C - get char usage
- b - counts all bytes (with whitespaces)
- f - sets file to load (or dir to start if '--graphical')
- E - set filename for exported json file (see JSON)

(string flags (--))

- hell - graphical tkinter dialog (no specification of options)
- graphical - ANSI Graphic selection (no specification of options)
- words - same as 'w'
- chars - same as 'c'

JSON

- Format:

    - words - number of words
    - chars - number of chars
    - kbd_hits - number of keyboard hits
    - stat_bytes - dict of statistics of bytes
    - stat_words - dict of statistics of words
    - avg_word_len - average word length

- How to load:

```
import json

f = open("example.json", 'r')
data = json.load(f)
f.close()

print(data["words"])
```
